

THREE-CORNER POND

Jefferson Twp., Lincoln County
U.S.G.S. North Whitefield, Maine

Fishes

Rainbow smelt
Largemouth bass
White perch
Yellow perch
Chain pickerel

Minnows
Golden shiner
Hornpout (bullhead)
Pumpkinseed sunfish
American eel

Physical Characteristics

Area - 72 acres

Maximum depth - 35 feet

Temperatures:

Surface - 77⁰F

30 feet - 46⁰F

Principal fisheries: Largemouth bass, chain pickerel, white perch, rainbow smelt

Three-Corner Pond was initially surveyed in 1955 at which time an excellent white perch fishery existed that was only lightly exploited.

Largemouth bass were transferred to Three-Corner Pond from Johnson Pond in 1981. At that time, bass tapeworm, a parasite, was not found in the largemouth bass of Johnson Pond and an over abundance of fish made Johnson Pond an ideal source for bass transfers. Largemouth bass have now become self-sustaining.

The rainbow smelt population is typically very cyclic providing anglers with inconsistent years of fishing.

A hand carried launch site is available to the angler along the southwest shore.

Surveyed - July, 1955

Revised - 1998
